JETHI TECH SOLUTIONS

Our Process

Understand

We find out why your idea makes sense, why it's going to be successful and why anyone would care about it. Get into the deeper requirement breakdown and add value from our multi-industry experience.

Brainstorm

We do intensive 2-day workshop combined with an in-depth review that lets us design your MVP. This is also based on User Research and User Interviews we conduct to understand the target audience better and design an MVP to meet the expectations.

Prototype

We create interactive prototypes that can be used and experienced via the design tools we use to help the customer get the understanding and the functional flow of users from a visual design standpoint.

Design

We come with the best creative team who design with passion for high-end aesthetic, we add visual polish with dynamic colours, fonts, and icons.

Develop

Our senior architects pick the perfect technology stack and then assign specialists who then jump into code and develop the best the class applications that your customers will love with all the global standards of technology and compliance.

Test

QA is a crucial step of our Application development cycle, we start with Manual Testing of interactions and functionality and then further work on writing automated test cases for business critical usecases of the application for continuous monitoring.
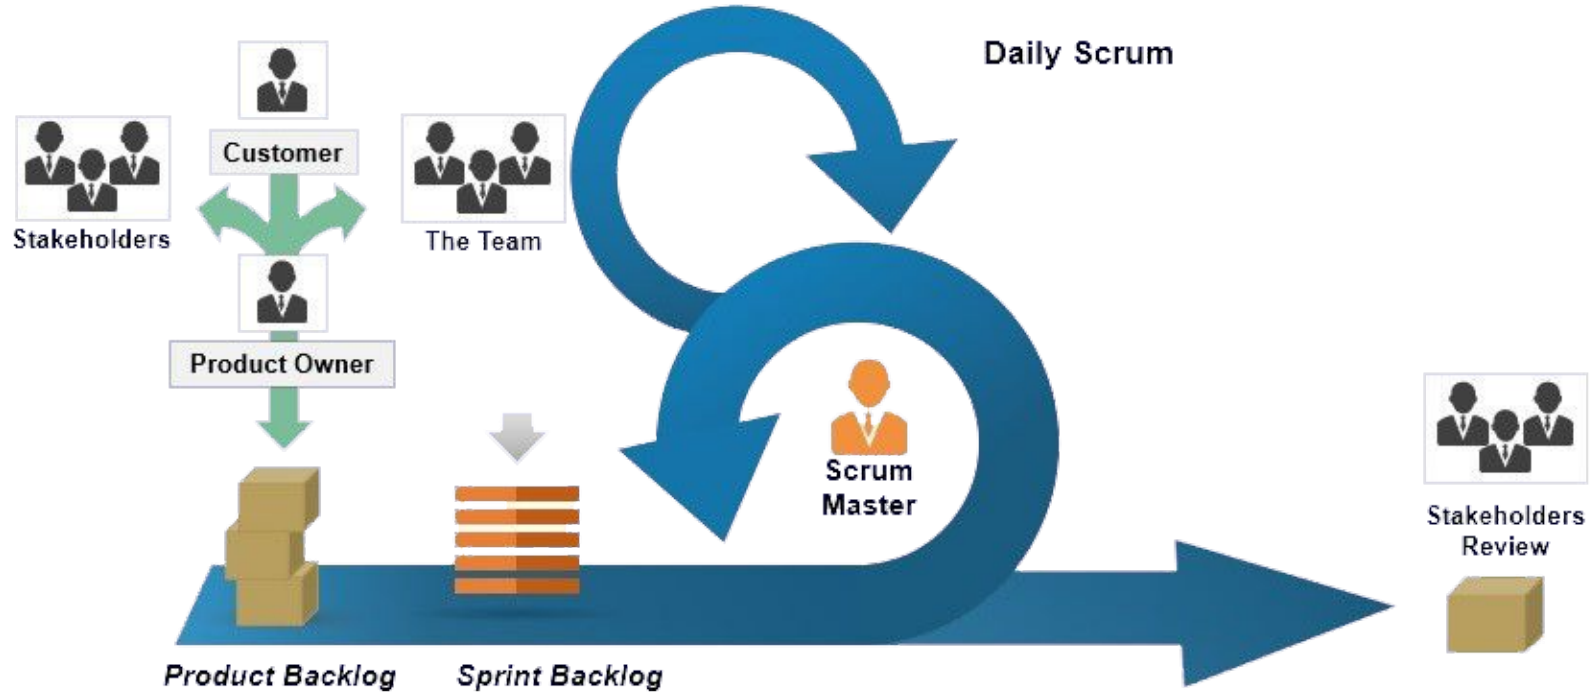

Launch

We deploy your applications to Google Play Store and the Apple App Store, and your website to staging and live servers. Ensuring the version of the project which was approved in UAT is reflecting on the production setup of the applications.

Maintain

We cover everything from the occasional check-up to ongoing feature expansions to whole new versions. We take care of code, servers, and your up-time to ensure your customers get the right experience of the product without any issue.
